

The Optimizer wall system provides cut wall components delivered to the job site ready for field assembly with minimal cutting.

Plans are designed to determine wall components. Saws cut and label the components for the wall package, and product is packaged and delivered to the job with a field assembly binder.

DESIGN

- » Designs are plan and project specific to ensure we have accounted for any and all plan revisions.
- » Designer will communicate directly with Sales and Customer during the process, developing relationships with superintendents and framers to ensure the project goes smoothly.
- » With wall and truss designers on staff, we can truly offer a “whole house design” from crawlspace to truss.

THREE SAWS USED FOR THE OPTIMIZER

- » Two Vekta V5 Razer Saws for cutting plate and cripples and marking all connection locations
- » Metra Cut for cutting headers and rake walls

BUNDLING AND PACKAGING INFORMATION

- » Packages will be bundled by wall and each component will be labeled, including all stud placement and connection points.
- » Packages will be built to be easily transported to the jobsite, and identified for easy installation.
- » Field Assembly Binder will go to the jobsite with each floor delivery, and includes a general design key, specific wall layout for each wall and total floor layout.

EXTRA SERVICES

- » We have the ability to add customized services to help the building project go smoothly, and save time.
 - » cutting specialized beams
 - » precut knee braces
 - » and more!

BETTER FRAMING SYSTEMS BENEFITS

- » Reduce your building lead times, saving on loan fees and improving cash flow
- » Reduce costs by eliminating materials on site, and minimize misuse of product due to cutting issues
- » Lower waste/trash costs, due to minimal cutting on site
- » Reduce costs paid to framers due to the reduced lead times
- » Framers increase billable square footage per month/year due to time savings
- » Cleaner Job Sites
- » Consistent and easier inspections
- » Reduced saw usage onsite results in a safer workplace and less noise impact on subdivision occupants
- » Uniform and Consistent building regardless of framing crew - Homes built per plan
- » The ability to continue to build in market growth with less experienced crew and superintendents
